
Plaxo - Online Address Book

If you're tired trying to keep up with all of your business and personal contacts, and keep all of their personal information up to date, then this wonderful service from Plaxo is for you. What exactly is Plaxo?

Plaxo is an online contact, calendar, task and notes manager that integrates with Microsoft Outlook and Outlook Express. What's so "cool" about Plaxo?

1. You can access your contacts, calendar, tasks and notes from any Internet-connected device - not just your PC or handheld.
2. You can synchronize multiple PC's and handhelds from Plaxo. That might not seem like a big thing, but, for those of you with multiple systems, you already KNOW what a huge problem it can be to ensure that your laptop and desktop's contact list and calendar are in sync! It's HARD. Plaxo solves this problem, simply and easily!
3. Plaxo serves as a very nice back-up solution for your calendar, contact, task and notes.
4. Most importantly, Plaxo solicits updates from your contact base - automatically - and allows your contacts to share or not share information. This very slick capability makes it easy for you to keep your contact list current - by letting your contacts keep it that way!

Plaxo is a free service. For \$19.95 however, users can purchase unlimited priority email support, dedicated phone support and faster turnaround times for problems. Commercial licenses for larger companies are available.
